

MySudo

Powered by Anonymome Labs™

MySudo is a consumer product offering from Anonymome Labs, a privacy and identity protection company trusted by Fortune 100 companies, backed by more than 22 issued patents, and building innovative proactive privacy and identity protection solutions for enterprises and consumers for over a decade.

About MySudo

The privacy and identity protection app that lets you create secure digital identities that you can share with the world instead of your personal information.

MySudo is the core product of the MySudo Suite and the most complete personal privacy and identity app available. It lets you create up to nine separate digital identities called Sudos, each with a real working phone number, encrypted email inbox, virtual card, private browser, and encrypted messaging, calling, and video. No personal information required to sign up.

The idea is straightforward. Instead of sharing your personal phone number, email, and payment details with every app, service, or person you interact with, you share your Sudo credentials instead. These aren't placeholders. They're fully functional credentials that represent you without exposing you. They become the details you share with the world instead of your personal information. Your personal information stays private because it was never shared in the first place.

What MySudo Looks Like in Practice:

Use a different Sudo for shopping, work, dating apps, side projects, or anywhere you'd rather not hand over your personal details. Retailers, apps, and contacts get a working identity. Your personal information stays off their lists.

Calls and messages between MySudo users are end-to-end encrypted. The private browser blocks ads and trackers and keeps a separate browsing history per Sudo. Virtual cards connect to your funding source and give you a layer of protection on every online purchase. By separating activities across Sudos, you reduce the connectivity between your actions online, limiting the data available to trackers, advertisers, and potential identity thieves.

"You decide who gets your personal information. Everyone else gets a Sudo."

The Product

MySudo is available on iOS, Android, and web extensions. It's available in AU, CA, DE, NZ, SG, KR, UK, and US. Each Sudo includes a working phone number for calls and SMS, a full email inbox with rich text editing and spam filtering, a virtual card for online purchases, a private browser with ad and tracker blocking and site reputation scoring, and a unique handle for free encrypted messaging, calling, and video with other MySudo users. All in one app, across up to nine separate identities.

Plans and Pricing

Plan	Price	
SudoGo	\$1.99/month	\$19.99/year
Sudo Pro	\$4.99/month	\$49.99/year
Sudo Max	\$14.99/month	\$149.99/year

Zero-Knowledge Architecture:

MySudo is designed so Anonymome Labs never needs to hold your personal information. No PII is required to create an account. Email content is private even from us. The identity you build in MySudo is yours, not ours to monitor, monetize, or misplace.

MySudo is part of the MySudo Suite, alongside MySudo VPN, MySudo Reclaim, and MySudo Password. Each product is independent, with its own plans and pricing. They're designed to work even better together.
