

MySudo Reclaim

Powered by Anonymome Labs™

MySudo Reclaim is a standalone product from Anonymome Labs, a privacy and identity protection company trusted by Fortune 100 companies, backed by more than 22 issued patents, and building innovative proactive privacy and identity protection solutions for enterprises and consumers for over a decade.

About MySudo Reclaim

An AI-powered inbox scanner that maps your data exposure and helps you take it back.

MySudo Reclaim connects to your inbox and scans email subjects and senders to show you exactly which companies have your personal data. It never reads the body or attachments of your emails. Once you see who has your data, MySudo Reclaim shows what they've collected based on their privacy policy and alerts you to any data breaches where your information was exposed.

From there, you can delete accounts you no longer need or update the ones you want to keep, replacing your personal contact details with Sudo credentials so those companies have your Sudo on file instead of your real information. It's a practical, account-by-account way to reduce your personal exposure without starting from scratch.

What MySudo Reclaim Looks Like in Practice:

After years of signing up for services, newsletters, and apps, your personal email and phone number are filed away in databases you've probably forgotten about. MySudo Reclaim makes that footprint visible. You see every company, what they know about you, and whether they've been part of a breach.

For the accounts you want to close, MySudo Reclaim gives you step-by-step instructions to delete them. For the ones you want to keep, you replace your personal details with Sudo credentials. Those companies still have a way to reach you. Your personal information is no longer what they have on file.

After a data breach, the same process applies. Identify which accounts were affected. Replace your personal details with Sudo credentials. Your real information is no longer sitting there for the next one.

"Your data is out there. MySudo Reclaim helps you take it back."

The Product

MySudo Reclaim is accessible from any browser on desktop, mobile, or tablet. No other MySudo product is required to use it. Gmail is supported now, with more email providers coming soon. Unlimited scans are included on monthly and annual plans. One-time scan access is also available.

Plans and Pricing

Plan	Price
One-Time Scan	\$7.99
MySudo Reclaim Monthly	\$9.99/mo
MySudo Reclaim Yearly	\$74.99 /year

Zero-Knowledge Architecture:

MySudo Reclaim is designed so Anonymo Labs never stores your data. The scanner processes your inbox to surface results without retaining what it reads. What you see stays yours. What we see is nothing.

MySudo Reclaim is part of the MySudo Suite, alongside MySudo, MySudo VPN, and MySudo Password. Each product is independent, with its own plans and pricing. They're designed to work even better together.
